Know of a leading business or startup that can succeed without technology? We challenge you to find one.

You cannot escape technology today. So, make it work for your career and your company. Information systems is worth taking for all business students, no matter what their major. Fordham is the place to do it: New York City has been dubbed "New Tech City" by the media for its astonishing growth in tech companies and jobs.

All Gabelli School students receive an introduction to information systems in the core curriculum. Many accounting, finance, and marketing majors realize the wisdom of taking information systems electives to gain technical skills that set them apart. For students who want to go even further—envisioning themselves as CIOs, or as business technology heads or consultants—the curriculum offers preparation for the highest-level jobs.

The faculty recently revised the information systems program to give students the knowledge and skills they need for today's growth areas of business. Students can choose courses from three career-oriented tracks: **business analytics**, **digital business innovation**, and **enterprise architecture**.

SUCCESS STORY

Brendan O'Grady, EY

Brendan O'Grady's route to a job at accounting powerhouse EY wasn't the traditional one. He didn't major in accounting.

Instead, Brendan's entrée into the Big Four came through information technology. Information systems was one of the primary concentrations, along with finance, that he added to his business administration major.

"I chose info systems because I recognized that it can apply to all fields of study, and finance and technology go hand in hand," Brendan said. "My dad manages IT at a trading house, so I saw how vital and useful that skill set is."
